Project : TO STUDY THE VARIATION IN THE SHRINKAGE PATTERN OF DIFFERENT FABRICS COMING FROM DIFFERENT SUPPLIERS – CEAT TYRE, BHANDUP (MUMBAI)

Tyre Cord Fabric is a type of industrial fabric made using High Tenacity Synthetic Yarn Cord in the warp and has negligible density of weft just to hold the warps together. Tyre cord fabric provide the tyre its fundamental properties such as shape, load carrying capacity, abrasion resistance etc.

NYLON is one of the important components that gives the unbelievable strength for tires .Since tyre is a composite the bonding of nylon with rubber is very important. But due to the variation of technology, materials, processing conditions, physical nature etc. The nylon shrinkage also may be vary. The project work aims to study the variation in the shrinkage pattern of different fabric coming from different supplier
