

Advancing Knowledge and Innovation in Rubber Chemistry

Rubber Chemistry & Technology is the official science publication of Rubber Division, ACS, an independent division of the American Chemical Society. As the premier scientific journal for the science and technology of rubber and elastomeric materials, we showcase important work from across the international scientific community – fundamental research and technical developments relating to chemistry, chemical engineering, materials science or characterization of rubber and allied substances.

29,000+ pageviews per month
25,000+ unique pageviews per month
18,000+ sessions per month

- Rubber Division, ACS members visit the journal website frequently and download 11,700 articles per year
- Nearly 1,000 unique corporate and academic institutions visit the site and download an additional 37,700 articles per year
- 100 subscribing companies and academic institutions worldwide
